CONTROL - PINE  
FRESH SCENT

LONG LASTING

## wood pellet litter

fresh, fast and economical

kitter gives your home the benefit of that fresh pine scent, absorbs more liquid faster than other litters, and is economical to use.

### Fast Acting

Do the kitter Challenge – Take a hand full of kitter and put it in a clear glass container. Add the same amount of water. See how quickly it is soaked up compared to other litters.

### Highly Absorbent

One kilo of kitter can absorb over 3 litres of odour causing liquid.

### Garden Friendly

kitter is great for composting. You can also spread it on the lawn or mix into garden beds. Not to be used in vegetable gardens. Always wash your hands after handling soiled litter and wear gloves.

### Odour Control – Fresh Pine Scent

Not only does kitter smell great in the litter tray, but, as it absorbs liquids much more quickly, the naturally occurring anti-bacterial oils in the wood work faster on odour, inhibiting the growth of bacteria which cause that ammonia smell.

### Australian Made & Owned

kitter is an Australian made product. Our production capacity is up to 120 000 tonnes of wood pellets per year, kitter is here to stay.

### Eco Friendly / Biodegradable

All raw materials for kitter are sourced from renewable plantation timber and are 100% bio-degradable.

### Long Lasting

kitter works with any litter tray. Use kitter with a two piece sieve tray to make each kilo last much longer. With a two piece sieve litter tray only the wet litter is removed. You only have to add a small amount to replace the litter that has absorbed the liquid.

### Pure Product – No Chemicals or Additives

kitter is made from, all natural wood with no additives of any kind.

### New to Your Pet?

Sometimes your pet is a bit hesitant to use a different litter, in a different tray. To allow a smooth, trouble free transition, sprinkle some of your old litter over the top of kitter for a short period until your pet is used to the new litter.
